### **Response to Arguments**

1. Applicant's arguments with respect to claims 1-3 have been considered but are moot in view of the new ground(s) of rejection.

### ***Claim Rejections - 35 USC § 103***

2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

a. Claim 4 is rejected under 35 U.S.C. 103(a) as being unpatentable over Barton in view of Scholder, Smith et al, Lautenschlager and Butler. Barton discloses a machine having a support member (12), a rotatable frame (24) mounted to the top of the support, a motor (70) a driving device (72) mounted on the support, and a controller (col.3, lines 30-36). Regarding the language, "for tilting and inverting human body" and "to manipulate said motor of said driving device to run by wire or remote control so as to drive said rotatable frame to turn to a predetermined angle" has not been given patentable weight because the recitation is purely functional in nature and does not recite any structure. As to claim 2, the support further comprises a pivoting tube fastened on top. The frame includes a shaft inserted thru the tube (col. 2, lines 45-54).

Barton discloses all of the limitations of the claimed invention except for the combination of the components of the driving device. Scholder teaches a driving device having a transmission gear (24), gear box (26; col. 5, lines 15-16) and

Art Unit: 3764

shaft (22). Scholder teaches the gear box, which could include a worm gear, back driven by a pedal torque or transmission gear driven by a shaft (27) for driving the machine. Lautenschlager teaches a gear transmission. Butler teaches a worm gear 42, motor 46 and transmission gear 68 and Smith et al teach a worm. It would have been obvious to one having ordinary skill in the art at the time the invention was made to modify Barton in view of the teachings such that a transmission gear, worm and worm gear provide a means to rotate a device for use while exercising.
